Scrum

Case Study Research Methodology

Cognitive Mapping

Discussion

- Scrum can be a mechanism to foster communication between students and supervisor
- Having a group meeting with the supervisor and the rest of the students was an opportunity to follow other people's work and learn from other people's mistakes and solutions
- When defining the tasks for a Sprint, a commitment is also made to make and present them at the next Sprint

Communication

- Tomás, G., Mira da Silva, M. & Bidarra, J. Supervision of master theses based on Scrum: A case study. *Education and Information Technologies*, Volume 26, Issue 4, 2021 (Q1)
